**Wind Tubes**

## WIND TUBES

Are your roof top units getting grease on them from nearby exhaust fans?

We recommend a wind band tube that extends the exhaust up and away from your roof top equipment.

*Call today for an estimate!*

## PRO TIP: LET YOUR FREEZER BREATHE

Avoid unnecessary service calls by making sure there is nothing stacked around the coil in your walk-in-box.

This will restrict air flow and cause the coil to ice up. In addition, stacking product too closely to the door thermometer can give false readings.

## PRODUCT FEATURE: FREEZER PRODUCT STANDOFF BRACKETS

- Holds product off freezer walls 2"
- Air circulation on all sides of product allows proper temperature to be maintained.
- Without air circulation on all sides of product, or overstuffing your freezer will not allow product to freezer properly
